NoSQL Assignment

Users

```
{
        _id: "username",
        name: "Full name here",
        email : "email_here@example.com",
        password: "store pass hash here",
        bio : "user self info",
        teams : [
                        {
                                name: "team name",
                                role: "admin, super or editor"
                        }, ...
                ]

}
```

Teams

Assumption 1 : only one admin and editor per team, otherwise would use array
Assumption 2 : team names are unique

```
{
        _id: team name,
        admin: username,
        editor: username,
        super: username,
        users: [ username, … ]
}
```

Posts

```
{

        author : username
        heading: "heading goes here",
        body: "body goes here",
        tags: ["technology", mongoDB", ...],
```

```
        images: [ {url : "image url", alt: "image description"}, … ],
        comments_count: 20,
        updated_at: date,
        last_comment: { embedded comment object here}
}
```

Comments

```
{
        comment: "comment goes here",
        parent: { type: "comment or post", id: parent_id },
        author: username,
        comments_count: 2,
        updated_at: date
}
```
